

WHEEL CADDY

🇬🇧 ASSEMBLY

WHEEL CADDY ASSEMBLY

PARTS OVERVIEW

Start by placing out all the parts so you can see them clearly.

There should be wheels, axle, frame, handles, bolts and screws.

ATTACHING THE WHEELS

Place one wheel on each side of the axle.

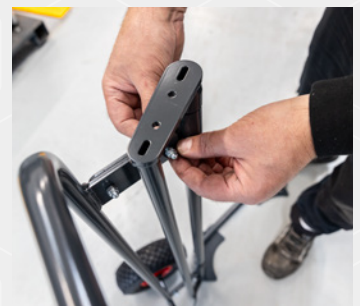

Attach the wheels with the included starlock washers - so they are secure.

ASSEMBLY OF THE FRAME

Secure the bottom of the frame so that it is firmly attached to the axle.

Make sure the frame is pointing upwards.

TIGHTENING

Check all screws and bolts to make sure everything is tightened correctly.

A good tip - use a zip tie to mount the springs if necessary.

TESTING

Once everything is assembled, you can test the caddy by rolling it back and forth to make sure the wheels are secure and it is stable.
